SUMMARY

Frontend developer with ~1 year of experience building responsive, interactive web interfaces using React and Next.js. Comfortable with the full UI layer — component architecture, state management, animations, loading/error states, and SSR/SEO with Next.js App Router. I care about how things look and behave: translating designs into pixel-accurate interfaces and thinking through the user-facing side of complex flows like booking, search, and real-time updates. I understand the backend well enough to own API contracts and wire up data cleanly, but my sharpest work is on what the user sees.

TECHNICAL SKILLS

Core Frontend	React.js, Next.js (App Router · SSR · SEO), TypeScript, JavaScript (ES6+)
Styling & Motion	Tailwind CSS, Framer Motion, Responsive Design, Pixel-perfect UI
State & Data	Zustand, Redux, Context API, React Hooks, REST API integration
Next.js Patterns	Server Components, Client Components, Metadata / SEO, Dynamic routing
UI/UX Practice	Figma to code, Loading / empty / error states, Accessibility basics
Backend (working knowledge)	Node.js, Express.js, MongoDB / Mongoose, JWT auth, REST API design
Tools	Git / GitHub, Postman, ESLint / Prettier, Vercel, Azure

EXPERIENCE

Full Stack Developer Intern	2024 – 2025
Web Development Firm — India	
– Built pixel-accurate React interfaces for 3+ client projects — translated Figma wireframes into responsive, production-ready UIs using Tailwind CSS. – Handled the full UI lifecycle on each project: component structure, state management, client-side routing, and loading / empty / error states throughout. – Worked directly with backend APIs — understood data contracts, handled async flows cleanly, and integrated JWT-protected endpoints into frontend auth logic. – Shipped features in Agile sprints with peer code reviews; consistently delivered UI work on time and to spec.	

PROJECTS

Noillin — Influencer–Business Marketplace [In Progress]
Next.js (App Router) · React · TypeScript · Tailwind CSS · Framer Motion · Socket.io · Zustand · Node.js · MongoDB · Redis · Meilisearch
– Building the complete frontend of a Fiverr-style influencer marketplace — architected in Next.js App Router with a deliberate split between server components (data-heavy pages) and client components (interactive flows). – Designed and implemented the full booking UI: influencer browsing → service selection → slot picker → confirmation screen → payment initiation — with consistent loading, error, and empty states at every step. – Built the influencer search and discovery UI: Meilisearch-powered instant search with live multi-facet filtering (category, platform, follower count, price, location) and smooth result transitions. – Wired real-time booking status updates into the UI via Socket.io — users see live state changes (pending → locked → confirmed) without page refreshes. – Applied Framer Motion for transition animations in the booking flow, keeping interactions responsive and perceptually fast. – Managed frontend state across the booking flow using Zustand — clean separation between server-fetched data and client-side interaction state.

- Implemented SSR metadata and structured page-level SEO across influencer profile pages and category landing pages using Next.js App Router conventions.
- Built the multi-role auth UI (user / influencer / admin) — login, OTP verification, role-based navigation, and JWT interceptor handling on the client.

Be-Yours — E-Commerce Platform [\[Live\]](#)

React.js · Tailwind CSS · Node.js · Express · MongoDB · JWT · Vercel

- Built the full React frontend: product listing pages, cart UI, order flow, and user auth screens — responsive across screen sizes.
- Handled client-side routing, state management, and API integration with a Node.js/Express backend.
- Deployed frontend on Vercel — live and publicly accessible.

Abito — Habit Tracker

Next.js · TypeScript · Tailwind CSS · MongoDB Atlas · Vercel

- Built a clean, mobile-first habit tracking UI in Next.js with TypeScript — focused on intuitive interaction patterns and consistent styling via Tailwind CSS.
- Connected to a MongoDB Atlas backend for persistent habit data; deployed on Vercel.

EDUCATION

Bachelor of Computer Applications (BCA)

2022 – 2025

Relevant coursework: Data Structures, DBMS, Web Technologies, Software Engineering, Algorithms

Higher Secondary Education (HSE)

2019 – 2021
