SUMMARY

Full-stack MERN developer with ~1 year of experience building complete web applications — from database schema and API design through to responsive, interactive UIs. Comfortable owning an entire feature end-to-end: I've built booking flows, real-time update systems, search integrations, and multi-role auth from scratch. Currently developing a production-grade influencer marketplace solo, handling both the Next.js frontend and a Node.js multi-service backend. I write maintainable code, think through edge cases, and ship things that actually work.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), HTML5 / CSS3
Frontend	React.js, Next.js (App Router · SSR · SEO), Tailwind CSS, Zustand / Redux, Framer Motion
Backend	Node.js, Express.js, REST API Design, JWT / RBAC, Middleware patterns
Databases	MongoDB / Mongoose, Redis (caching · slot locking), Schema design, Query optimisation
Real-time & Search	Socket.io, Meilisearch (full-text · faceted filtering)
Infra & Tools	BullMQ / RabbitMQ, AWS S3, Git / GitHub, Postman, ESLint / Prettier
Payments	Stripe, Razorpay, OTP via Nodemailer, Refresh tokens

EXPERIENCE

Full Stack Developer Intern

2024 – 2025

Web Development Firm — India

- Delivered 3+ MERN stack projects end-to-end — owned the full slice from schema design and API implementation to React UI and deployment.
- Built auth flows, order management, inventory systems, and RBAC from requirements to working code across multiple client projects.
- Designed RESTful APIs with JWT auth and middleware-level validation; modular service architecture reduced API-related bug reports noticeably.
- Translated Figma wireframes into pixel-accurate, responsive React interfaces using Tailwind CSS — covered loading, empty, and error states throughout.
- Worked in Agile sprints with peer code reviews; consistently delivered on schedule.

PROJECTS

Noillin — Influencer-Business Marketplace [In Progress]

Next.js (App Router) · Node.js · Express · MongoDB · Redis · Socket.io · Meilisearch · BullMQ · RabbitMQ · AWS S3 · Stripe · TypeScript

- Building a full-stack influencer marketplace solo — Next.js frontend, Node.js multi-service backend, end-to-end from data model to deployed UI.
- Designed the complete booking flow: influencer selection → service selection → slot suggestion → Redis lock → booking creation → payment initiation, with consistent error handling on both sides.
- Engineered a slot generation engine on the backend (availability rules → real-time suggestions) wired to a live-updating booking UI on the frontend via Socket.io.
- Implemented Redis-based slot locking to prevent double-bookings — temporary lock on slot selection, held until payment completes or TTL expires.
- Integrated Meilisearch for influencer discovery: full-text search with multi-facet filtering (category, platform, follower count, price, location) and custom ranking.
- Built a multi-role JWT system (user / influencer / admin) — refresh tokens, OTP email verification, interceptor middleware, and role-gated API routes.

- Frontend: Next.js App Router with server components for data-heavy pages, client components for interactive flows, structured metadata for SEO.
- Backend: service-based modular architecture (User, Influencer, Availability, Booking, Search, Admin) with schema-level input validation and centralised error handling.

Be-Yours — E-Commerce Platform [\[Live\]](#)

React.js · Node.js · Express · MongoDB · JWT · Azure · Vercel

- Full-stack e-commerce app: product listings, cart, order placement, and secure auth — built and deployed end-to-end.
- Express + MongoDB backend with RESTful APIs; React frontend with state management and client-side routing.
- Backend on Azure, frontend on Vercel — live and publicly accessible.

Abito — Habit Tracker

Next.js · MongoDB Atlas · Tailwind CSS · TypeScript · Vercel

- Full-stack habit logging app: CRUD API with MongoDB Atlas backend, Next.js frontend, mobile-friendly Tailwind UI.
- Deployed on Vercel; built as a practice project for Next.js + TypeScript patterns.

EDUCATION

Bachelor of Computer Applications (BCA)

2022 – 2025

Relevant coursework: Data Structures, DBMS, Web Technologies, Software Engineering, Algorithms

Higher Secondary Education (HSE)

2019 – 2021
