SUMMARY

MERN stack developer with ~1 year of hands-on experience building full-stack web applications. Comfortable working across the stack — from designing REST APIs and database schemas to building responsive UIs and wiring up real-time features. Currently building a production-grade influencer marketplace from scratch, involving Redis-based slot locking, Meilisearch integration, Socket.io real-time updates, and a multi-role JWT auth system. Focused on writing clean, maintainable code and delivering complete, working products.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript (ES6+), HTML5 / CSS3
Frontend	React.js, Next.js (App Router), Tailwind CSS, Zustand / Redux, Context API, Framer Motion
Backend	Node.js, Express.js, REST API Design, JWT / RBAC, Middleware patterns
Databases	MongoDB / Mongoose, Redis, Schema design, Query optimisation
Infra & Tools	Socket.io, Meilisearch, BullMQ / RabbitMQ, AWS S3, Git / GitHub, Postman
Payments & Auth	Stripe, Razorpay, OTP via Nodemailer, Refresh tokens

EXPERIENCE

Full Stack Developer Intern

2024 – 2025

Web Development Firm — India

- Built and shipped 3+ MERN stack projects end-to-end — React frontends, Express/Node backends, MongoDB — using reusable component patterns that reduced delivery time across projects.
- Implemented authentication flows, order management, inventory systems, and role-based access control across multiple client applications.
- Designed RESTful APIs with JWT auth, middleware-level validation, and modular service architecture — reduced API-related bug reports significantly.
- Translated Figma wireframes into responsive, pixel-accurate React interfaces using Tailwind CSS, including proper loading, empty, and error states.
- Participated in Agile sprints, peer code reviews, and on-time delivery across team projects.

PROJECTS

Noillin — Influencer–Business Marketplace [In Progress]

Next.js (App Router) · Node.js · Express · MongoDB · Redis · Socket.io · Meilisearch · BullMQ · RabbitMQ · AWS S3 · Stripe · TypeScript

- Building a marketplace (Fiverr-style) connecting brands with influencers for campaign bookings — full-stack, production-grade, built solo from architecture to UI.
- Engineered a slot generation engine: influencer availability rules (working days, time slots, date overrides) feed a real-time slot suggestion system surfaced during booking.
- Implemented Redis-based slot locking to prevent double-bookings — a temporary lock is created on slot selection and held until payment completes or expires.
- Integrated Meilisearch for influencer discovery with full-text search, multi-facet filtering (category, platform, follower count, price, location), and custom ranking.
- Built real-time booking status updates (pending → locked → confirmed) for both parties using Socket.io.
- Designed a multi-role JWT auth system (user / influencer / admin) with refresh tokens, OTP email verification, and role-based API protection.
- Structured backend with service-based modular architecture (User, Influencer, Availability, Booking, Search, Admin) with schema-level input validation throughout.

- Used Next.js App Router with server components for data-heavy pages and client components where interactivity is needed; applied SSR and metadata for SEO.

Be-Yours — E-Commerce Platform [\[Live\]](#)

React.js · Node.js · Express · MongoDB · JWT · Azure · Vercel

- Built a full e-commerce app with product listings, cart, order placement, and secure user auth.
- Designed and deployed RESTful APIs with Express and MongoDB; handled state management and client-side routing on the frontend.
- Deployed on Azure (backend) and Vercel (frontend) — live and accessible.

Abito — Habit Tracker

Next.js · MongoDB Atlas · Tailwind CSS · TypeScript · Vercel

- Built a daily habit logging app with CRUD operations, persistent MongoDB backend, and clean mobile-friendly UI using Tailwind CSS.
- Deployed on Vercel; used as a practice project for Next.js + TypeScript fundamentals.

EDUCATION

Bachelor of Computer Applications (BCA)

2022 – 2025

Relevant coursework: Data Structures, DBMS, Web Technologies, Software Engineering, Algorithms

Higher Secondary Education (HSE)

2019 – 2021
